JALEMA

FILING SYSTEM FOR THE GRAPHIC INDUSTRY

Perfect solution for offset, flexo and label printers.

FILING SYSTEM FOR THE GRAPHIC INDUSTRY

LESS STRESS
LESS WASTE OF TIME
SAVE SPACE AND MONEY

This space and time-saving file system is based on the unique single point suspension system used to suspend files laterally from a profile. This saves you up to 45% of space when compared to traditional systems, such as filing cabinets. The system consists of two basic elements: a suspension point on the files and a profile from which files are suspended.

JALEMA'S FILE FOLDERS ARE DESIGNED SPECIFICALLY FOR FLEXO APPLICATIONS; SOME TIPS!

1. Select a folder slightly larger than the plate size to allow easy access/retrieval.
2. The Repro-File is perfect for flexo plates due to its rigidity and weight support.
3. The beauty of Jalema's Grafi-System design is that the folders have no gusseted expansion where the content can fall or crumble to the bottom of the folder.
4. When inserting plates in the pocket(s) of the files, you will notice how the center of the pocket will allow for expansion up to 2.5 cm while the outer edges are supporting (or gently clamping) the material, keeping it upright and secure.
5. When using Job- or Repro-files It is recommended to evenly distribute the weight within the two pockets for proper balancing
6. When necessary separate those jobs of over 2.5 cm thick and mark them as "1 of 2" or "1 of 3" depending on the number of plates accompanying each job. As per one large manufacturer of flexo plates: "It is an advantage to retain the cushion layers between each plate. This will allow to plate to breathe and help preserve the image".

ADVANTAGES OF THE JALEMA SYSTEM:

> Efficient use of space
> Orderly and well-organised plates, films, etc.
> The single point suspension system reduces filing to a simple movement of the hand when hanging and removing files
> Several rows of files can be suspended above one another, saving an even greater amount of space
> The plates, films, etc. won't be damaged when stored into the Jalema files.
> Protects the flexo plates from UV-light.
> One job, one file; all the working material in one file

FILES

The Grafi-System contains extremely durable files in three different designs that have been specially created for storing films and flexo- and offset plates. In addition, multi-functional files have been constructed from 220 gram whitekraft cardboard to keep your workplace in order. These files are used to save orders, projects, visual aids, working drawings and other materials.

CUSTOM-MADE

Despite our wide range of standard files, it often happens you are looking for something slightly different. You may have seen a file that you would like to change in terms of size or design, or you may want to have your own logo printed on the file. Jalema has the expertise and capacity to do that for you. We can do special files in several materials such as cardboard and polypropylene. Contact Jalema for the possibilities. We think along with you, produce fast and deliver quality.

JOB-FILES

220 gram Whitekraft cardboard | WITH TWO POCKETS

Dust, creases, folds and scratches are disastrous to all types of image carriers. The Job-files all feature both a normal pocket and a second pocket with a dust flap. This allows you to keep lithographs etc. dust-free and separate from other work materials. The file sizes are tailored to the most common printing press formats. The Job-files are constructed of brown 220 gram Whitekraft cardboard while the insides are lined with a smooth, white layer. The largest file is constructed of 290 gram Whitekraft cardboard. All the files have a clear imprint.

Colour	Art.	For size (mm)	Size file (mm)	Min. Quantity	Max. Weight	Filing capasity (mm)
	5225200	255 x 390	275 x 435	50 pcs	2 kg	2 x 10
	5237200	370 x 450	390 x 495	50 pcs	2 kg	2 x 10

	5262200	620 x 750	640 x 795	50 pcs	6 kg	2 x 10

JALEMA

UNI-FILES

220 gram Whitekraft cardboard | WITH ONE POCKET

Unlike Job-files, Uni-files only have one pocket, which naturally has a special flap for safe and dust-free filing. Uni-files are thinner and less expensive than Job- and Repro-files, but are just as strong and functional. The two largest formats are constructed of heavier 290 gram Whitekraft cardboard. Ideal to file flexographic clichés.

REPRO-FILES

335 gram Tenax cardboard | WITH TWO POCKETS

Repro-files are identical to Job-files, but with a few minor exceptions. They are constructed of a heavier type of cardboard (335 gram Tenax cardboard) and are coloured grey. Repro-files are stronger and sturdier and also come with two pockets.

UNI-FILES

Colour	Art.	For size (mm)	Size file (mm)	Quantity per unit	Max. Weight	Filing capasity (mm)
	5225100	255 x 390	275 x 435	50	2 kg	10

Repro-files are the perfect solution to store flexo plates!

DESIGN-FILE

GRAFI DESIGN-FILE WITH 2 GUSSETS

The Design file measures 485 x 570 mm (suitable for internal size 450 x 550 mm), has an unparalleled storage capacity and is ideal for working drawings, visual aids and other fragile or thicker, materials. The contents are easy to view and to access. Design files are equipped with a linen soufflet halfway down the front and the back, giving the file a capacity of no less than 30 mm.

Colour	Art.	Description	Quantity per unit

LABEL HOLDER

SELF-ADHESIVE LABEL HOLDER

A self-adhesive label holder can be attached to the top or side edge of the files in which an indicator strip with room for 2 or 3 lines of text can be inserted.

Colour	Art.	Description	Size/ mm	Quantity per unit
	6103000	Bag of 50 label holders	108 x 31	1
	6202418	Indication strips for label holder. 50 sheets of 11 strips.	105 x 21	1

JALEMA JOCKEY

JALEMA JOCKEY, BOX 50 PIECES, TRANSPARENT, INCL. INDICATION STRIPS

The Jalema Jockey is a universal label holder that fits on every file and is placed in holes that you make with a perforator. Most Jalema files com pre-punched. The list of contents can be quickly and easily printed on indication strips (included).

PRODUCT ADVANTAGES

> The Jalema Jockey is unbreakable.
> The indication strips can be printed out by the sheet or even part of a sheet.
> The text is visible from both the front and side.
> It is possible to link databases to the print job to save time writing on the indication strips.
> Various colour codings possible.
> The label holder is slanted so that the inner files will not get caught on it.

JALEMA

RACKS

UNI RACK

OR OPTIMUM USE OF SPACE

Jalema Uni racks are suitable for Job-, Uni- and Repro-files. Uni racks are supplied as do-it-yourself kits and include clear assembly instructions. Assembly is extremely simple. Racks can be expanded next to each other in an unlimited quantity. The profiles can be adjusted in height every 3 cm. They have to be ordered separately. Files of smaller size are suspended in the upper section and larger files in the lower section. The maximum evenly distributed load is 200 kg per profile. Jalema offers two types of Uni racks: racks of 400 mm depth designed for files up to 390 x 495 mm and racks with a depth of 550 mm which are suitable for files up to 640 x 795 mm.

OFFSET RACK

FOR THE LARGEST FORMATS

An Offset rack (basic) is available for filing the largest Uni file. This rack is also supplied as a do-it-yourself kit and includes one profile. The maximum evenly distributed load is 250 kg. There is also a stackable version (top) available for the Offset rack, which allows you to store twice the number of files in the same floor space.

BUILD YOUR OWN RACK!

Do you want to optimise storage space? Than look for the best combination of files and racks. The schedule shows exactly how many rows of a specific file you can store in a rack. If the outcome is for example 3 rows of files, you need to order the rack, a set of 3 duo profiles (as shown on page 6) and the files. Racks can be extended with extensions. This way you can build a complete archive to safely store your plates in.

E.g. you can store 4 rows of 275 x 435 mm files in the 400 mm rack.

JALEMA

WALL UNIT

FOR A HANDFUL OF FILES

A wall-unit is especially useful if placed next to the work space. The small wall-unit takes up little space, can be attached to almost any type of wall and has a profile length of 200 mm. Attachment materials are supplied as standard.

Colour	Art.	Max. load (kg)
	5812500	25

Useful length of profile (mm)	Max. filing size (mm)	package/weight
200 (duo Profile)	275x440 up to and incl. 640x800	1pc./0,27kg

WALL FILING RACK

FILES AT YOUR FINGERTIPS

Ideal for smaller filing systems near the work space. It provides you with a number of files within easy reach. The wall-filing racks are available in two lengths 800 and 1600 mm and come with attachment materials as standard.

Colour	Art.	Size rack (mm)	Max. load (kg)
	5810800	800 x 360 x 200	100

| Useful length of profile (mm)	Max. filing size (mm)	package/weight
1600 (duo Profile)	275x440 up to and incl. 640x800	1pc./5,6kg

CODETABS

Codetabs are laminated self-adhesive coloured tabs that are available either blank or with numbers, letters, year date printed on them. Codetabs make it possible to develop your own personal coding system. Whether you file by order number, client name, postal code, date or client number, Codetabs are the answer. The use of Codetabs on files rules out the possibility of misfiling. If a file is hung incorrectly, it stands out immediately because the colour pattern is interrupted. The year date tabs are also convenient because they make it immediately apparent the year in which the file was created, thereby also making it obvious when the file is old enough to be removed from the archive. Virtually all Jalema files come with a coding strip consisting of six 26 mm sections and one 21 mm section. The Codetabs are adhered to these sections, thus creating an efficient coding system. Codetabs are available in a variety of different packagings. The number tabs come in handy rolls of 500 labels or in bags of 100. You can also order a complete kit that contains 10 rolls of 500 with all the numbers (0-9) in a handy display. Individual letters are available in bags of 100, as well as the option to order the entire alphabet in a box of 26 x 100 letters A-Z. Blank stickers are available in rolls of 500 and year stickers in rolls of 1,000.

JALEMA

JALEMACLIP USER INSTRUCTIONS
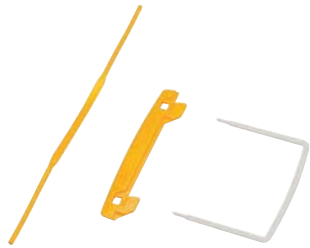

Parts
1. Tube, cover and extension piece.

Compiling documents
2. Insert the extension piece through the cover and then through the perforation holes on the documents to be compiled.

3. Attach the tube to the ends of the extension piece.

4. Pull the extension piece so that the tube slides through the perforation holes.

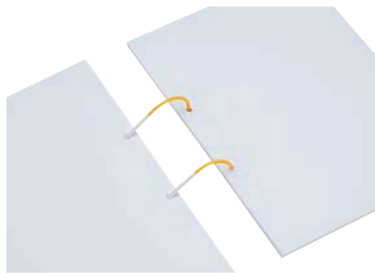

5. Secure the flexible tube in the notches in the cover.

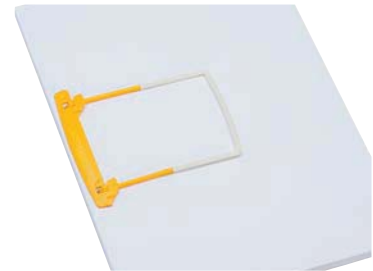

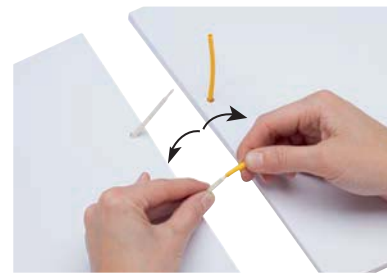

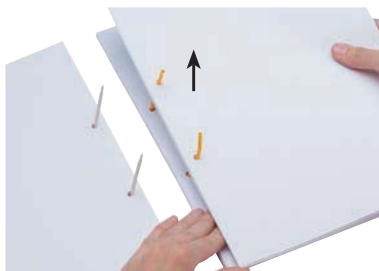

6. Your documents are now compiled!

Leafing through, adding and removing
7. With your thumb and index finger, push on the ends of the cover and remove the tube from the notches in the cover.

8. You can now leaf through the documents like a book.

9. Loosen the tube from the extension piece to add or remove documents.

10. The flexible tube lets you remove documents without tearing the perforation holes or damaging the documents.
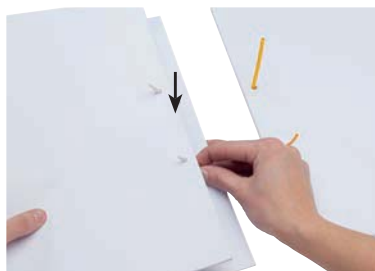

11. New documents can also be easily added via the extension piece.

SELF-ADHESIVE POCKETS

BUSINESS CARD POCKETS - SHORT SIDE OPENING

Let the customer know exactly who they should get in touch with!

PRODUCT ADVANTAGES

> Easy to attach to any kind of presentation material.
> Convenient way of filing business cards for future reference.
> Can be mounted either vertically or horizontally.
> Features finger hole for quick card removal.

PRODUCT DESCRIPTION

> Clear antistatic polypropylene sheath with adhesive back and finger notch.
> Dimensions: 95 x 60 mm.
> Can hold cards up to 90 x 56 mm
> Optional: A4 sheets of 90 x 56 mm inserts available to personalise this product.
